SUMMARY

Software developer (university degree, UPATecO) focused on backend and full stack work. I build REST APIs with NestJS, Express and Spring Boot on PostgreSQL, with interfaces in React and Angular, and deployments with Docker and AWS. I have working knowledge of Python and FastAPI (currently learning). I competed in hackathons in teams of three, including 2nd place at the PunaTech Hackathon. English B1. Seeking my first full-time, remote role as a backend or full stack developer.

TECHNICAL SKILLS

- **Backend:** Java (Spring Boot, Spring Security, Spring Data JPA, JWT), NestJS and Express (Node.js), REST APIs
- **Frontend:** React, TypeScript, JavaScript, Angular, HTML5, CSS3, Tailwind CSS, Vite
- **Databases:** PostgreSQL, Prisma, DynamoDB, relational modeling, SQL
- **Cloud & DevOps:** AWS (Lambda, API Gateway, DynamoDB, SAM), Docker, Nginx, Git, GitHub
- **Blockchain:** Rust (Odra, Casper), Solidity (Monad)
- **Architecture & Practices:** REST, MVC, SOLID, OOP, DTO, Clean Code, serverless architecture
- **Currently learning:** Python (FastAPI, Pydantic, SQLAlchemy), Kafka, Rust (Tokio, Axum), C/C++

PROJECT EXPERIENCE

SEM Salta — Metered Parking System | PunaTech Hackathon, 2nd Place, 2026

NestJS · React · Vite · Tailwind CSS · PostgreSQL · MercadoPago

- Built the React frontend (Vite, Tailwind CSS) of the metered-parking system for the Municipality of Salta; 2nd place at the PunaTech Hackathon.
- Built the MercadoPago payment UI and the integration with the backend REST API (NestJS, PostgreSQL).
- Worked in a team of 3, delivering under the event's time constraints. Demo: https://parki-pay.vercel.app/

Dengue Centinela — Community Dengue Surveillance | Hackathon, 2026

React 19 · Express · Prisma (ORM)

- Built the Express backend with Prisma for logging and querying community dengue reports in Salta.
- Designed the data model and the REST routes consumed by the React 19 frontend.

AgroCentinela — Offline-First Agro-Climate Alerts PWA | Kiro + AWS Hackathon (Código Facilito), 2026

React 18 · Vite · TypeScript · NestJS on AWS Lambda · DynamoDB · AWS SAM · Zod · Kiro

- Built the project individually: backend, frontend, infrastructure and deployment.
- NestJS backend on AWS Lambda with DynamoDB and infrastructure as code (AWS SAM); shared data contracts with Zod.
- Offline-first PWA in React and TypeScript (Service Worker, Background Sync, IndexedDB), with push notifications (Web Push/VAPID) and a layered recommendation engine (Amazon Bedrock with on-device fallback and rules).
- Deployed on Netlify; tested by judges and ~15–20 users during the hackathon. Live site: https://agrocentinela.netlify.app/ · Code: https://github.com/Maurezg7/AgroCentinela

Hermes — Messaging and Community Platform (Discord-inspired) | 2026

Java 21 · Spring Boot 3.4 · Spring Security · JWT · Spring Data JPA · PostgreSQL · Angular 21 · TypeScript · Docker · Nginx

- Built a full stack messaging and community application with a Spring Boot backend and an Angular frontend.
- Implemented JWT authentication and protected routes (Spring Security), with email verification via 6-digit codes that expire after 5 minutes.

- Designed the PostgreSQL relational model (friendships, statuses, servers with dynamic channels, notifications) and exposed a REST API the client polls to refresh messages.
- Configured Docker and Nginx as a reverse proxy and deployed on Render. Demo: https://hermes-inky-two.vercel.app/

YieldVault — Smart Contract for an Autonomous Yield-Farming Agent on Casper | Casper Agentic Buildathon, Smart Contracts Lead, 2026

Rust · Odra Framework (v2.7.2) · Casper Network · Casper Testnet

- Rust smart contract deployed on Casper Testnet, with on-chain logging of the agent's actions (log_action) for traceability and auditing.
- Implemented execute_swap (rebalancing) and deposit functions; fixed an out-of-gas deployment failure by raising the deploy gas from 200 to 500 CSPR.

Other projects: Cazatalentos — on-chain numbered tickets for artists in Northwest Argentina (Solidity, React, NestJS, Monad).

TRAINING EXPERIENCE

- **Softtek — Internship / work simulation · July – August 2025** — Team development of a Library Management system in Java (MVC pattern). Repos: https://github.com/gianalercia/GestionBibliotecaMVC · https://github.com/gianalercia/GestionBiblioteca
- **No Country — Work simulation · October 2026** — Teamwork with agile methodologies on a real project. Repo: https://github.com/No-Country-simulation/S08-26-equipo-5

EDUCATION & TRAINING

- **Technical Degree in Software Development** — UPATecO (Provincial University of Administration, Technology and Trades), 2023 – 2025
- **Club Java Master (intensive training)** — Udemy, 2025
- **Web Development** — CoderHouse, 2021

ADDITIONAL INFORMATION

- **Languages:** Spanish (native) · English B1
- **Community:** Active member of SaltaDev; hackathon participant (PunaTech, Kiro + AWS, Casper).
- **Availability:** Remote work.
